Varenummer	4008059
Varenavn	Delivery Tracker E Metos SmartKitchen
Størrelse	mm
Vægt	0,010 kg

### Beskrivelse

Metos SmartKitchen Delivery Tracker E is an easy-to-use solution that ensures transport temperature and product health safety. Maintaining a certain temperature during transport is vital to the quality of many products.

Delivery Tracker is suitable for transport between different locations, food distribution for lunch tables and hospitals.

At the transport start point, one or more Delivery Tracker measurement devices are included in the transport and switched on. The Delivery Tracker device can also be permanently installed in the transport trolley. No other measures are required at the point of departure or during transport.

The measurement devices will be handed over to the recipient upon delivery. Delivery is either accepted or rejected and comments added using the Kitchen Helper phone app. If the delivery does not meet the temperature requirements and is rejected, the responsible person will initiate the necessary measures in accordance with the self-monitoring plan.

The Delivery Tracker devices do not need to be named separately, any

measurement device on hand can be used at any time by just switching it on.

Staff, especially the HACCP manager, monitor deliveries through the SmartKitchen online service. If necessary, the delivery comments can be edited afterwards, but the temperature measurement itself cannot be changed.

Metos SmartKitchen Delivery Tracker E has temperature sensor outside at the end of the cable. The device is battery operated.
